

Kasba Casa

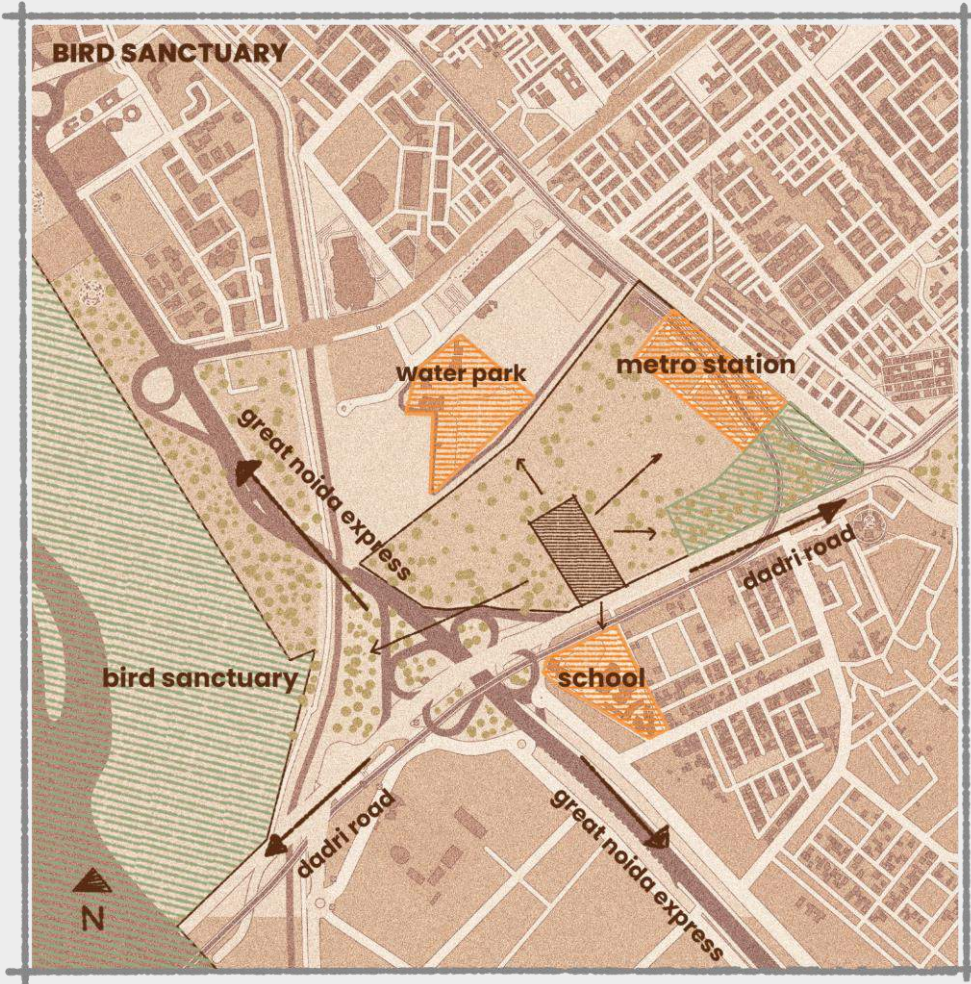

Why We Choose This City ?

- Delhi is among the top cities which is losing its cultural Identity.
- Providing new housing solutions to its residents **To Intertwine Long Term Housing Solution While Keeping The Cultural Aspects Of The City Alive.**

Blending in **Urban Fabric**

Why We Chose This Site ?

- Proposed site has the sight of the Yamuna river and botanical garden with the bird sanctuary around.
- Near by metro station and school
 - surrounded beauty of nature
- No major construction around 300 m radius of the site.

Value Of Culture In Cities

- Space **where people can gather around interact and communicate** rather than being lost in their apartments.
- Inspired from the **Chowl Housing** concept found in old cities
- The Apartments are arranged in a manner facing each other, providing streets in between as **A Hybrid Space Where People Can Perform Any Ancillary Activities.**
- The concept of **Vertical Colonies** is being proposed throughout the rise of buildings with common spaces for adaptive living.

Gully **have human connection** but highrise don't have human connection.

Gully have **human scale** but high-rise don't have human scale.

Gully have **Balance Of Place And Movement**, and high-rise don't have a place to rest, just movement.

Gully have **Macro , Meso And Micro** shared spaces and high-rise have only meso and micro

Formation And Integration Of Gully And High-rise

- The clusters we formed in our design are inspired by the mitigating features of Indian streets Known as "Mohallas".
- Vertically in the formation of **three apartments (3bhk,2.5bhk,2bhk) placed in descending order**. Giving access to the three apartments by a **common street** through placed staircases and corridors.

Single Flats

2, 2.5,3 Bhk Flats Stacked Together To
Form an Impression Of House In A Gully

Stacked Flats Are **Arranged In Row** To
Form A Street

Formation And Integration Of Gully And High-rise

- Creating **play and pause movement** in the spaces by pushing alternative flats inside out.

Formation And Integration Of Gully And High-rise

- Giving **2 meter gap between the flats** for cross ventilation.
- Placing **staircase on the street** for connecting all the flats at different level.

- Service Core
- Street
- 2bHK flat
- 2.5bHK flat
- 3bHK flat

Formation And Integration Of Gully And High-rise

- Creating a cut out of **7m*10m** for skylight.
- Useful for ventilation and ambient light

- Service Core
- Street
- 2bhk flat
- 2.5bhk flat
- 3bhk flat

Formation And Integration Of Gully And High-rise

- Arranging the row into a block of building.
- Core connecting all the 14 streets also accessible to the levels in one street.

- Service Core
- Street
- 2bhk flat
- 2.5bhk flat
- 3bhk flat

Formation And Integration Of Gully And High-rise

- Creating a **Void On Every Street** for good amount of **light** and **cross ventilation** of air.
- These created spaces are accessible from the street.
- Can be used for **hybrid space** and **various activity**.

- Service Core
- Street
- 2bhk flat
- 2.5bhk flat
- 3bhk flat

Respecting The Individuality

Respecting the individuality of every owner of the flat, creating **A Recreational Hybrid Space** in the apartments will give them a benefit **Of Transforming The Space For Their Use**. Spaces can be easily changed by the **Provided Modular Sliding Panels** in the flats itself and they can transform it for **multipurpose** as they choose to be.

Interior Spaces

Recreational Space Formation

Connecting and removing Sliding panels to creat new spaces. Can be used for kids playing area, yoga room, personal study desk and more. It is **totally depends on the individual need of the owner** to use the space of their choice.

Design Attributes

Solar Control Glass

Reflective glass allows optimum natural daylight through, thereby improving occupants' health and well-being. The lower solar factor of Solar Control Glass cuts down on the heat transmission and helps prevent the interiors from heating up. Reduces uncomfortable glare from the sun.

Design Attributes

Solar panels

Reflective glass allows optimum natural daylight through, thereby improving occupants' health and well-being. The lower solar factor of Solar Control Glass cuts down on the heat transmission and helps prevent the interiors from heating up. Reduces uncomfortable glare from the sun.

Design attributes

Rainwater Harvesting

Method that can be quite easily implemented. In times of such water scarcity Rainfall is collected and stored so that it can be used in the future. Rainwater harvesting can aid in the replenishing of groundwater resources which also affects the climatic conditions in areas with water scarcity.

Design attributes

Permeable pavement

Permeable pavements are designed to infiltrate storm water, reduce peak flows, filter and clean contaminants in the water stream, and promote groundwater recharge. Best management practices for storm water management

Design attributes

Design attributes

Green Pocket

Provided at every flat for green and refreshing air. Also works as vertical greenery throughout the building makes the façade of the building aesthetically pleasing.
